

InFlux v0.6 Economic Verification (Consolidated)

Date: 2026-06-19
Evidence source: reports/economic + docs/audits/v0.2-v0.5

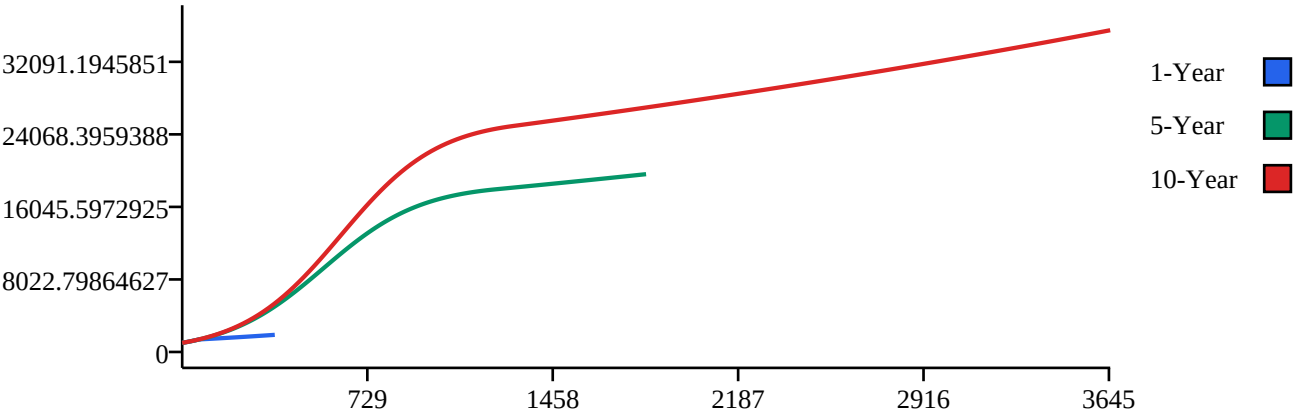

Scenario Summary

Metric	Value
Scenarios	10
Blocks Simulated	108,030
Years Simulated	295.972603
Reserve Utilization	0.9025360920242596
Supply Growth Rate	9.032774408258998
Ledger Integrity	PASS

Supply Stability

Scenario	Initial	Final	Avg Growth	Max Epoch Growth
1-Year	1000.0000	1894.2565	0.894256	0.004900
5-Year	1000.0000	19665.9588	18.665959	0.004871
10-Year	1000.0000	35585.9009	34.585901	0.004949

Supply Curves
Epoch | Supply

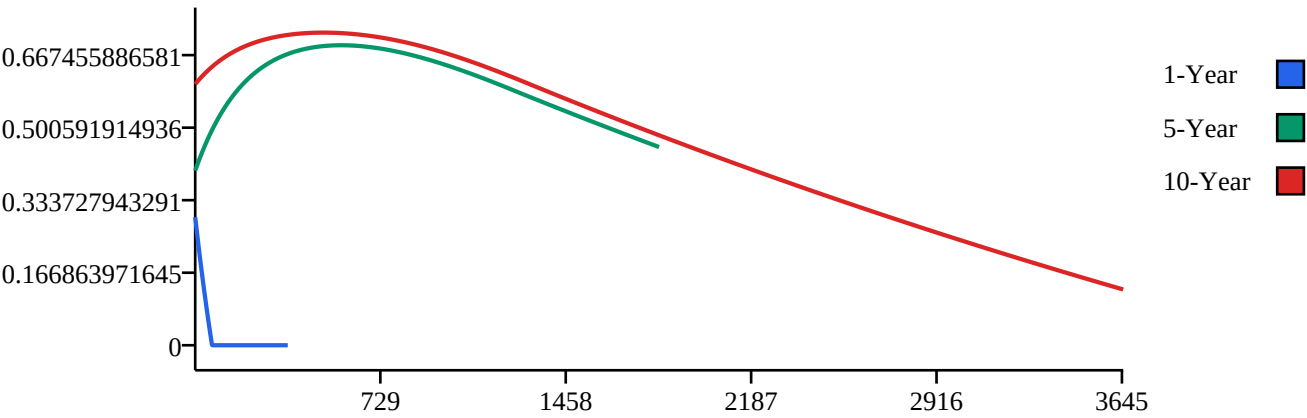

Reserve Health

Scenario	Ending Reserve	Reserve Utilization	Coverage Ratio (End)
----------	----------------	---------------------	----------------------

1-Year	0.000000	1.000000	0.000000
5-Year	8967.209384	0.282832	0.455976
10-Year	4566.033524	0.742529	0.128310

Reserve Coverage Curves (Reserve / Supply)
Epoch | Coverage Ratio

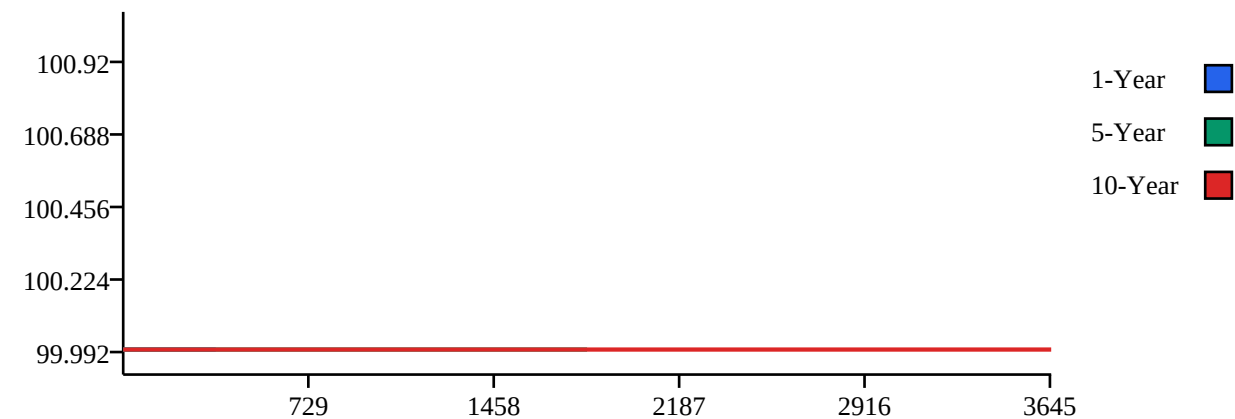

Participant Dynamics

Scenario	Initial	Final	Growth	Retention
1-Year	100	100	0.000000	1.000000
5-Year	100	100	0.000000	1.000000
10-Year	100	100	0.000000	1.000000

Participation Curves

Epoch | Participants

Reproduction Statistics

Scenario	Events	Average Size	Maximum Size
1-Year	365	1.14753780	5.51649900
5-Year	1825	1.93776488	2.94944992
10-Year	3650	3.60771494	5.33708190

Determinism and Consensus Metrics

Evidence	Value
Replay Determinism Score (v0.2)	1.000
Consensus Agreement Rate (v0.3)	1.000
Resilience Recovery Rate (v0.4)	1.000
Cross-Environment Determinism (v0.5)	PASS
100k Final Hash	fc9451c88c39c1274e857dfc0a4a6f5fab5e5e6e48101cff87e87a7a341c

Observed Strengths

- Reserve no longer exhausts in the tuned 5-year and 10-year scenarios.
- Suite-scale execution remains deterministic with ledger integrity PASS.
- Long-horizon (100k block) run remains reproducible with stable reference hash.
- Cross-phase evidence remains aligned: replay, consensus, resilience, and economic outputs.

Observed Risks

- 1-year alias scenario still exhausts reserve under current steady_growth parameters.
- Supply growth acceleration in tuned long horizons should be bounded by policy targets before v0.7.

- Consensus and replay metrics are imported from prior audits; reruns should be included in release CI.
